Casing and Tubing Design - Society of Petroleum Engineers

OF CASING DESIGN 1.1 PURPOSE OF CASING At a certain stage during the drilling of oil and gas wells, it becomes necessary to line the walls of a borehole with steel pipe which is called casing. Casing serves numerous purposes during the drilling and production history of oil and gas wells, these include: 1. Keeping the hole open by preventing ...

Chapter 1 FUNDAMENTAL ASPECTS OF CASING DESIGN

In tubing- and casing-design practice, it is customary to apply the ellipse of plasticity only when a detrimental effect results. For a conservative design, this increase in burst resistance normally is ignored. Compression loads reduce burst resistance and must be considered when they occur.

Production Casing Design Considerations - US EPA

After drilling and casing your well, the next phase in well completion is perforation. Just as drilling and casing happen together, best practices in today's oil field involve an "underbalanced" downhole environment, and thus, have the perforation happening in tandem with the installation of production tubing and packing.. Workover Rigs. This phase of the completion is usually done with ...

Also, once tubing is installed, operators will not typically produce from the production casing unless the well is operating on rod lift. At surface, the casing wing valves will be shut, and the well will be producing from the tubing through the production tree portion of the wellhead.
